

# MACNEIL QUIET DRIVE TECHNOLOGY

## MacNeil Quiet Drive Technology

- > Benefits:     Reduced electrical consumption.  
                  No hydraulic hose or piping installation.  
                  No hydraulic leaks to contaminate brushes.  
                  Reduced installation costs.
  - > Features:     Variable frequency drive (VFD) provides speed  
                  adjustments from 50 to 150 RPM.  
                  Soft Start feature allows motor and gearbox to spool up.  
                  Extends life of all components.  
                  Amperage load sensing is built into the VFD. This allows  
                  the brush to stall when needed.  
                  Noiseless operation. You will be surprised how quiet your  
                  brushes operate.  
                  Rugged design with aluminum and stainless steel  
                  construction.  
                  Maintenance free. No oil levels to check.
- Get quiet. Get electric. Get MacNeil.**
