

COLORS *that* CLEAN

A Breakthrough in Wash Brush Foam

Envirosoft is a significant development in foam technology providing new levels of car wash efficiency, effectiveness, and consumer satisfaction.

Made from high-quality microcellular closed-cell foam, Envirosoft brushes have faster line speeds, are cleaner, quieter, and safer than competitive brushes. Available in vibrant colors, brush elements are easily replaced to extend the life of car wash equipment.

Faster:

- lightweight material allows high rotational speeds (110rpm)
- allows higher conveyor throughput without sacrificing effectiveness
- closed-cell foam does not absorb water or chemicals that would increase brush weight

Cleaner:

- dense closed-cell surface sheds dirt and grit so it remains gentle on vehicle finish
- high-speed capability ensures more efficient cleaning
- thin profile tapered foam fingers reach into small areas

Quieter:

- wedge-shaped lightweight foam reduces impact noise
- provides more pleasant car wash experience

Safer:

- in operation, foam orients to maximize cleaning performance, while being kind to cars and equipment

Consumer appeal:

- consistently cleans cars
- high-speed, quiet operation increases consumer confidence
- vibrant colors enriches the car wash experience
- lightweight, scientifically designed fingers clean without risk of damage

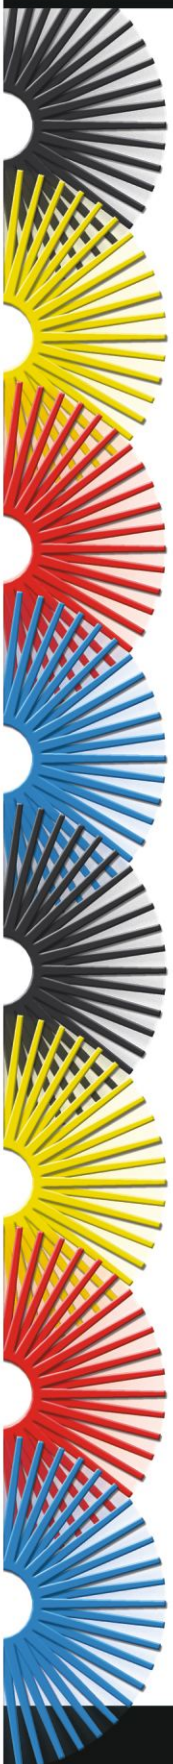

Operator appeal:

- high speed and high efficiency increase throughput
- modular "spider" design makes for easy maintenance and foam replacement
- lightweight fingers reduce operating costs by increasing equipment life.
- increases customer satisfaction
- long life
