envirosoft™ 2nd GENERATION

"THE NEW WAY TO WASH"

Faster, Cleaner, Quieter

Consistent with MacNeil's commitment to produce top quality products that deliver superior results, MacNeil's engineers performed extensive research and development to design a wash material that is safe, lightweight, quiet and gentle: Envirosoft 2nd Generation foam.

Envirosoft 2nd Generation is a closed cell foam, so it does not retain water or particles like some materials. As a result, the brush is up to 100% lighter than cloth, increasing the operational response level and allowing rotation speeds of 100 RPM or more.

Because of its unique shape and mounting configuration, Envirosoft 2nd Generation foam dramatically increases cleaning performance while providing damage control safeguards. Its thicker, wedge shaped fingers are forgiving on vehicle protrusions.

Give your customers the quieter, safer wash they've been asking for, with the shiny finish they'll tell their friends about.

Feature

Benefit

Wedge shaped foam fingers

Provides a thorough clean without being aggressive on mirrors, license plates or antennas

Lightweight

Very quiet, smooth operation
Faster response time
Less wear and tear on equipment
Gentle on vehicles

Closed cell foam material

Produces a mirror-like shine on customers' vehicles

Operational speed – 100 RPM

Delivers superior cleaning results

Stacked disc mounting configuration

Easy to maintain and replace foam fingers
Brush assembles in minutes

Attractive appearance & color selection

Customer appeal
Operator choice
