

THE TECH 21 IMPROVES DRYABILITY WHILE DECREASING THE NEED FOR HAND TOWELING

Barrie, Ontario, Canada – March 1, 2005 - The Tech 21 Advanced Drying System from MacNeil Wash Systems brings intelligence and flexibility to the drying function. With its SMART nozzle technology, operators can control the amount and direction of airflow with just the touch of a button. This improves drying ability and overall wash quality while at the same time decreases the need for hand toweling.

The Tech 21 offers flexibility. Operators can choose from packaged systems or build a dryer system with horsepower specific to their needs and site profiles with the Pro-Build system. Each dryer is 10 HP, so operators have the opportunity to build a drying system as small or large as they need. All systems can be ordered with SMART or fixed nozzles or a combination of both.

SMART nozzle technology allows for quick and easy programming of drying capability through the use of a hand held remote controller (just like a TV remote controller). SMART nozzle features include multiple programmable positions, 360 degree rotation, time delay to increase dwell time for hard-to-dry areas and oscillating and flipping capabilities. It allows the operator to program drying to address specific needs while ensuring all areas of vehicles receive a proper dry including vehicle backs and side mirrors. And to change settings at any time, it is as simple as changing channels on a TV.

MacNeil recently announced it's newest feature for the Tech 21 – the option to purchase producers in either black (standard) or blue. The new blue producers match the blue Envirossoft foam of MacNeil's brushes and help operators complete the clean, professional image of their tunnel system.

“The Tech 21 has been a real performer for us,” says Todd Radel, General Manager of 10th Street Auto Wash in Sioux Falls, South Dakota. “It has so many different nozzle positions that you can dry any type of vehicle – small cars, small pickups, full size pickups, vans and SUVs. And, our customers like the Tech 21 too. They have told us it looks sharp, it's not too noisy and it's fun to watch it dry their cars. The Tech 21 has 'looks, labor and volume' – it's the smart thing for your bottom line.”

Features of the Tech 21 include:

- SMART nozzle technology
- Fiber optic synchronization
- 155 mph airspeed
- Welded steel fans for high volume airflow
- Stainless steel reinforced molded producer housings
- Maintenance-free Pro-Coat finish
- 3800 CFM (107.6 CMM) rating
- Dynamically balanced fan
- Black or blue producers
- 1 year warranty on drive system

About MacNeil Wash Systems

MacNeil Wash Systems was established in 1982 and is an ISO 9001:2000 certified manufacturer. The company designs and manufactures quality car wash systems for the tunnel car wash industry and for the automotive dealer, fleet and rental markets. MacNeil products are engineered to provide superior cleaning performance, reduced maintenance, increased production, maximum cost savings and equipment longevity. All MacNeil equipment is backed by our focus on service excellence. We distribute and support our products through a North American network of more than 40 distributors that is second to none in capability and performance.

For more information on the Tech 21 and other MacNeil products, please visit www.macnielwash.com or call (800) 361-7797.
